

Summer Service Bulletin

Planting season is now over for most of us. With the weather nice and the planting season still fresh in our heads, it is the perfect time to get the planters checked out and gone through before returning them to storage.

We have several service plan options available for SRES to come to your location and service your planters. Click [here](#) for a printable version of the details, or visit www.sresweb.com and click on the service tab. Look for the Service Plan link at the bottom of the page. We also would like to remind everyone about our Premium Service Agreements, which are available only until August 30th. Loaner parts will not be available for planters out of warranty unless they have the Premium Service Agreement.

Other Service Items:

Singulator Pin Covers are now available to eliminate a place seeds can potentially hang up on SurePlant covers. This is easily installed using an existing bolt. This replaces the previous adhesive cover.

Air Compressor – Clean or replace the air filters. With pressure in the tank, drain the condensation. Drain the moisture jar on the pressure regulator/dryer. On PTO driven air compressors, check the oil. If dust made it past the air cleaner, the oil may have dirt in it and will need changed.

Battery – Disconnect the battery. Make sure it is clean, and keep it charged up throughout the year with a battery maintainer.

Thanks,

Adam Krueger
