

SRES Runabout

The SRES Runabout Planter

Smaller, more maneuverable, more affordable...

The Runabout Planter is compact and light weight, (2-row weighs only 1,500 lbs.) while still offering all the functionality and controls of the SRES Classic Planter, or even the SRES Advanced Planter.

Mounted on a Monosem frame, the Runabout Planter is available in 2-row or 4-row configuration and any row width.

The Runabout Planter is ideal for planting on beds and for planting relatively small numbers of plots quickly and efficiently.

"The Nunhems USA, Inc. Production Dept. is using the Monosem MS precision planter modified by SRES for quick clean-out between vegetable seed lots. We are extremely pleased with the planter's performance and the technical support offered by the staff at SRES. Small vegetable seeds can have unique handling properties and the technicians at SRES did a great job adapting their technology to our needs."

Mark Weisensel
